## WE WILL BE USING

- Hologram IoT Platform
- Adafruit Trinket M0
- Circuit Python
- SimCOM SIM800 2G Breakout
- Any IDE / Text Editor
- Any Serial Monitor

## WE WILL BE USING

- Hologram IoT Platform
- Adafruit Trinket M0
- Circuit Python
- SimCOM SIM800 2G Breakout
- Any IDE / Text Editor
- Any Serial Monitor

Do you have these?

# AGENDA

- Who is Hologram?
- Hand-out Kits
- Activate SIM
- Assemble Kit
- Use 16 AT Commands to send “Hello World” through TCP

# Who is Hologram?

# HOLOGRAM

- The largest cellular network for “things”
  - 150+ countries / 600+ carrier partners
  - All assessable through 1 SIM
- Developer First
  - Developer Plan
  - Developer Community
  - Open-Source
  - kB billing
  - Full API
- We make spec hardware
  - We are not a hardware company

EVIL SCIENTIST CODE

PROMO CODE: **IOTDEVFEST18**

Assemble de ~~Evil Legion!~~

Kill

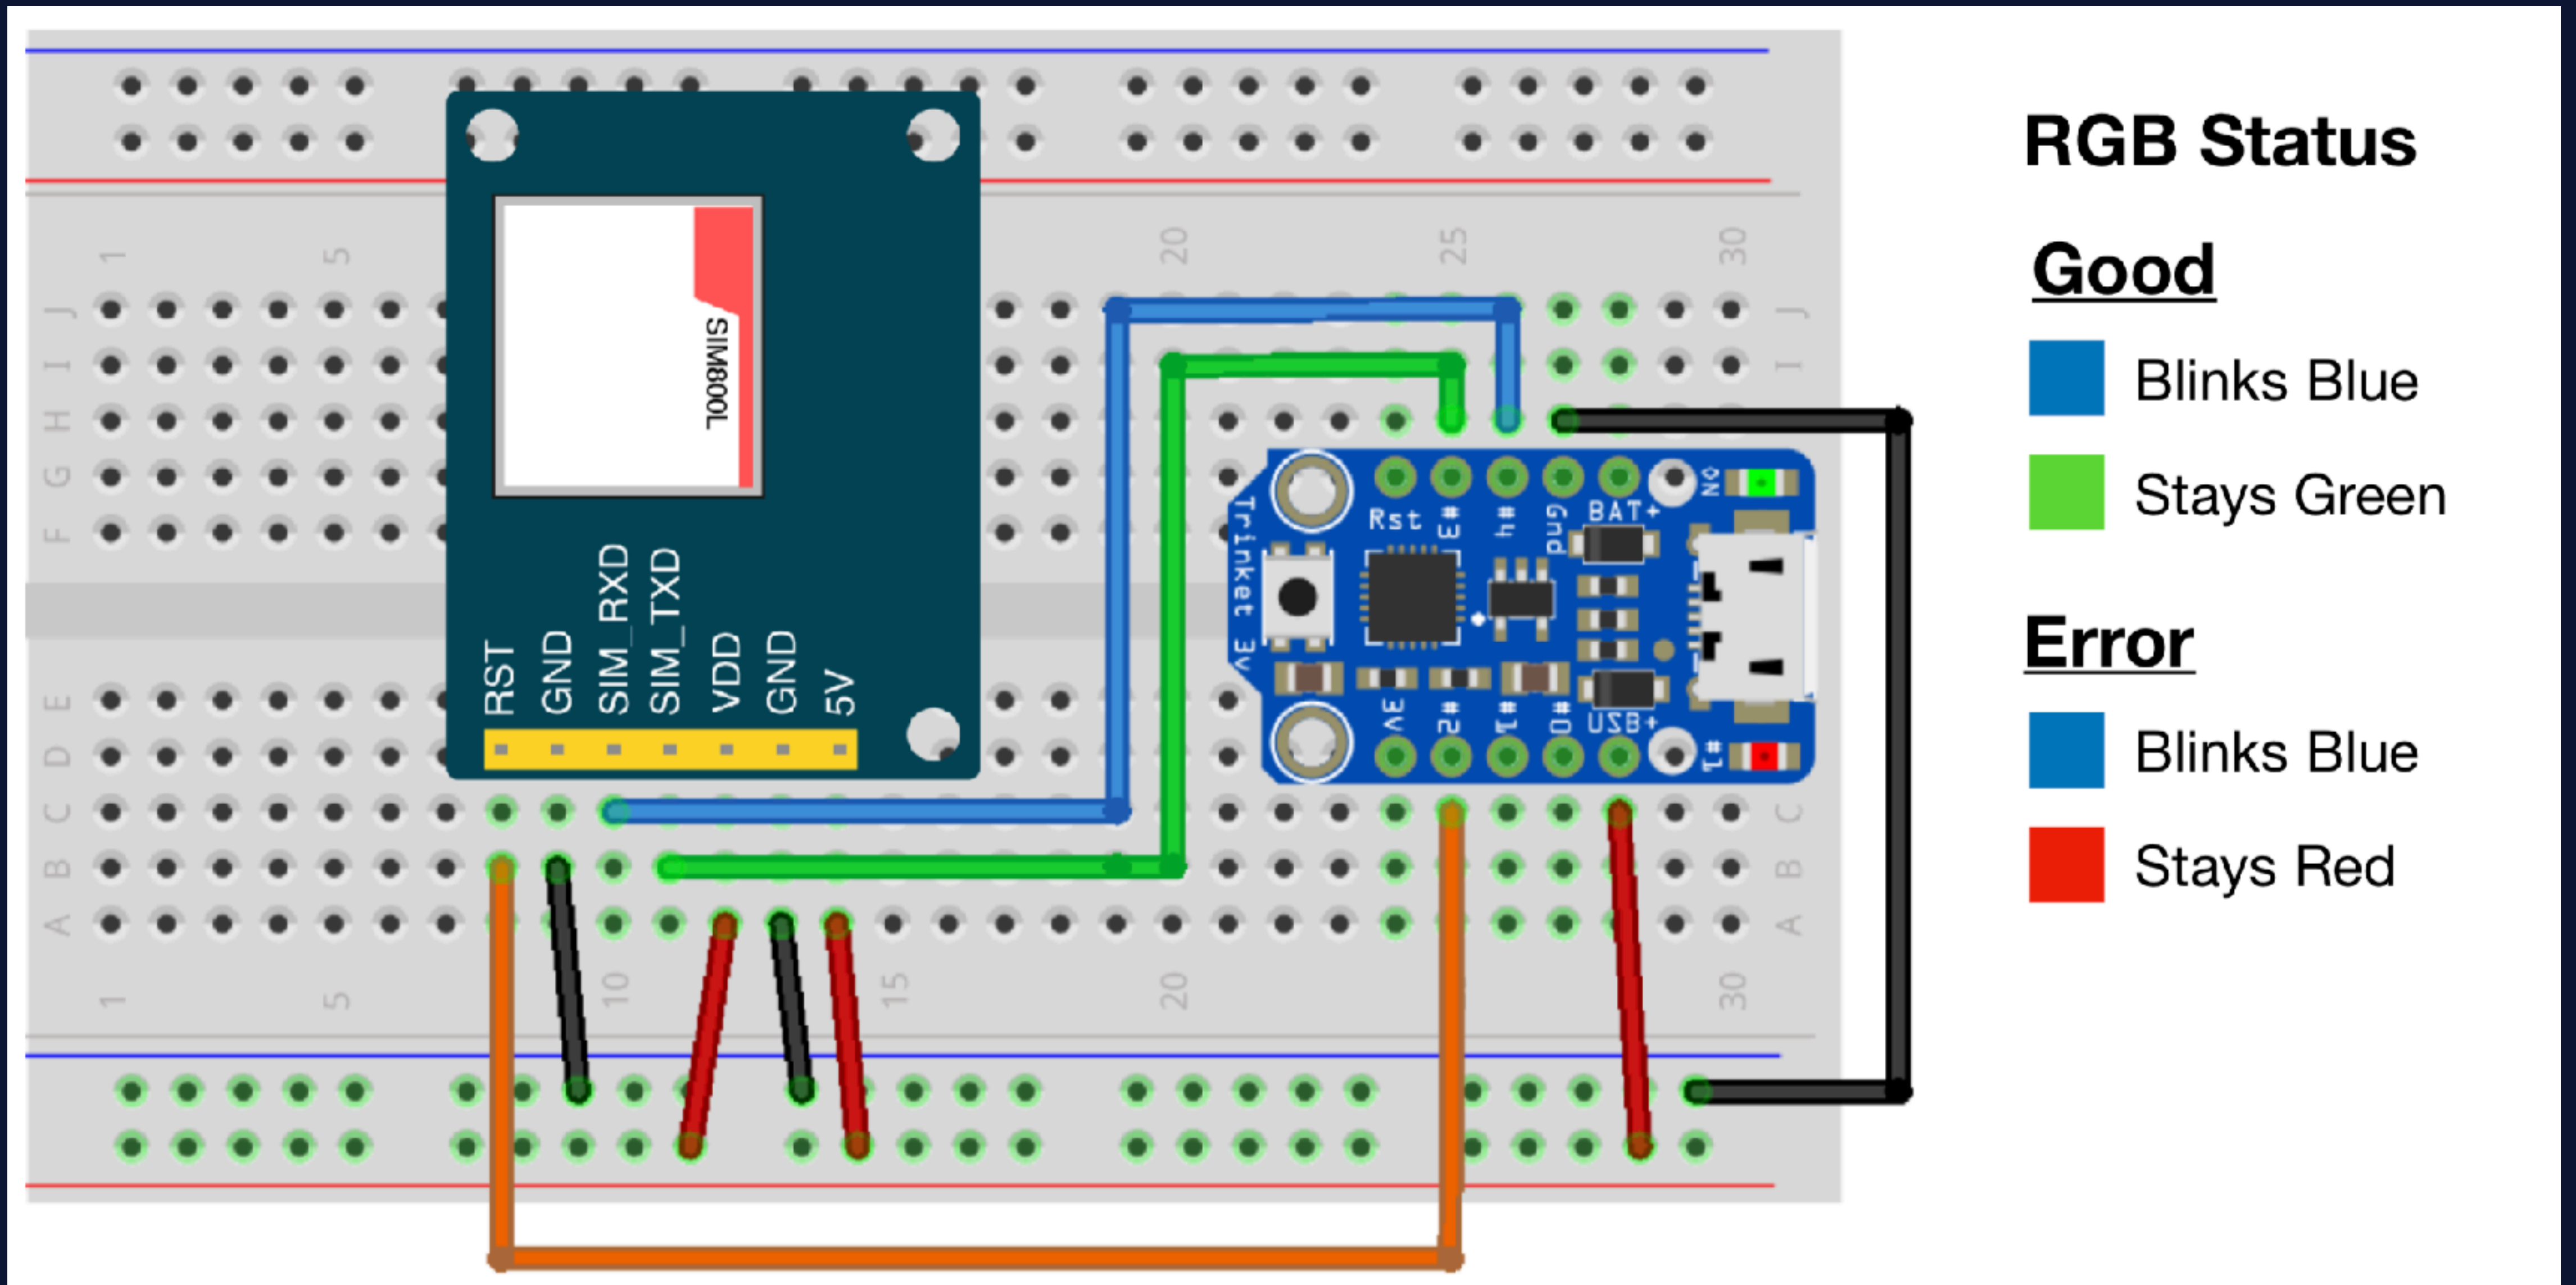

# Insert the SIM in to Modem Breakout

MAKE SURE TO DO IT RIGHT  
CHECK IT TWICE

WIRE -> POWER -> VERIFY LIGHT IS GREEN

# Setup Serial Monitor

- Make sure the device is plugged in
- Open Arduino IDE or another Serial Monitor
- Determine which port the Trinket is connected to
  - Should be something like **cu.usbmodem1451**
- Set baud to **19200**

# Lets chat about the Trinket M0

DID YOU NOTICE THE NEW USB DRIVE?  
WINDOWS? INSTALL THE DRIVER

# Write de Evil Code!

THIS ONE IS TRUE

# Trinket Preloaded Files

- Updated lib
- Main.py that runs verify code
- Workshop folder with 3 sub folders, each with main.py
  - Factory
  - Verify
  - Challenge
  - Final
- Illustrate moving a file

open **challenge/main.py**

LETS WALKTHROUGH THE CHALLENGE

# Example Command

Command  
↓

```
if not sendCommand("AT+CIPSHUT\r\n", 65, "SHUT OK", "ERROR"):  
    return False
```

Expected  
Success Msg  
(optional\*)  
↓

Timeout  
↑

Expected  
Error Msg  
(optional\*)  
↑

# Add Hologram KEY

SIM NUMBER	DEVICE ID	LINK ID
8944501805175421103	159258	357292

<b>C16</b>	AT+CMGF=1\r\n	10	OK	ERROR

# Success?

```
/dev/cu.usbmodem1451
Send

CMD (~2 seconds) AT+CIPSERVER=1,4010
### NETWORK CONNECT SUCCESSFUL ###
### SEND MESSAGE #####
CMD (~75 seconds) AT+CIPSTART=1,"TCP","23.253.146.203","9999"

CMD (~5 seconds) AT+CIPSEND=1,51

CMD (~60 seconds) {"k": "eLI#4[bL", "d": "Yay, We did it! -benstr"}

### SEND MESSAGE SUCCESSFUL ###
CMD (~4 seconds) AT+CIPCLOSE=1
```

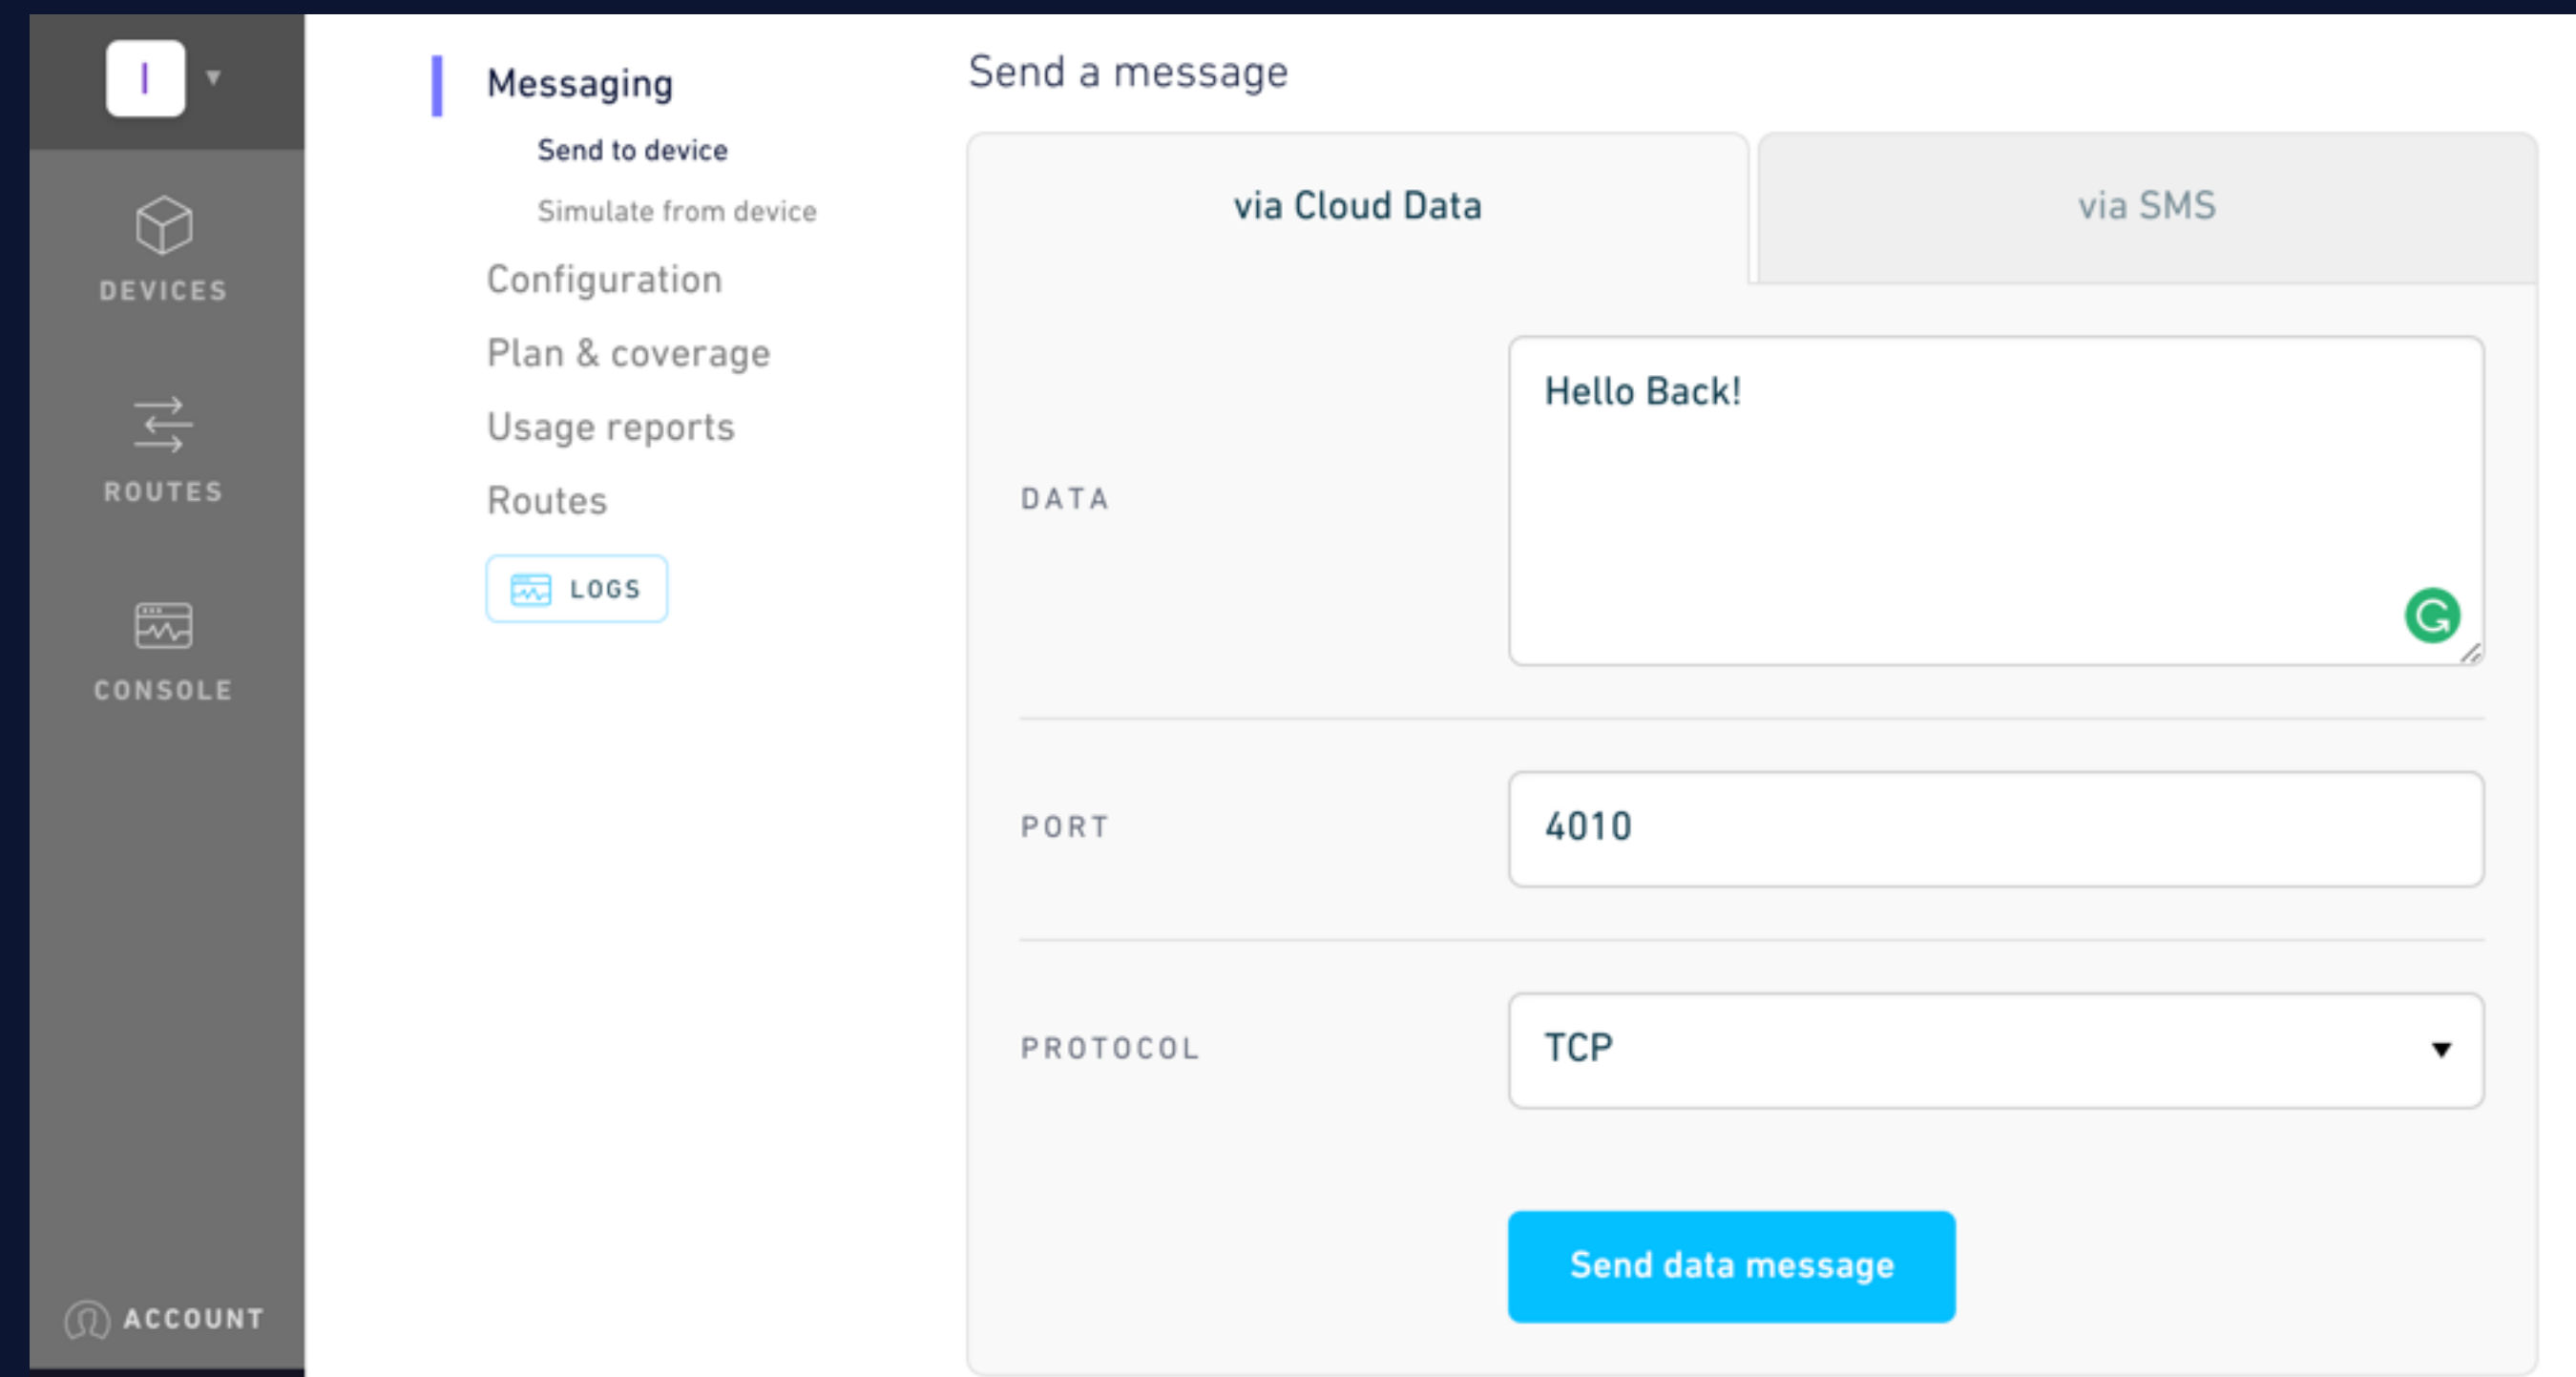

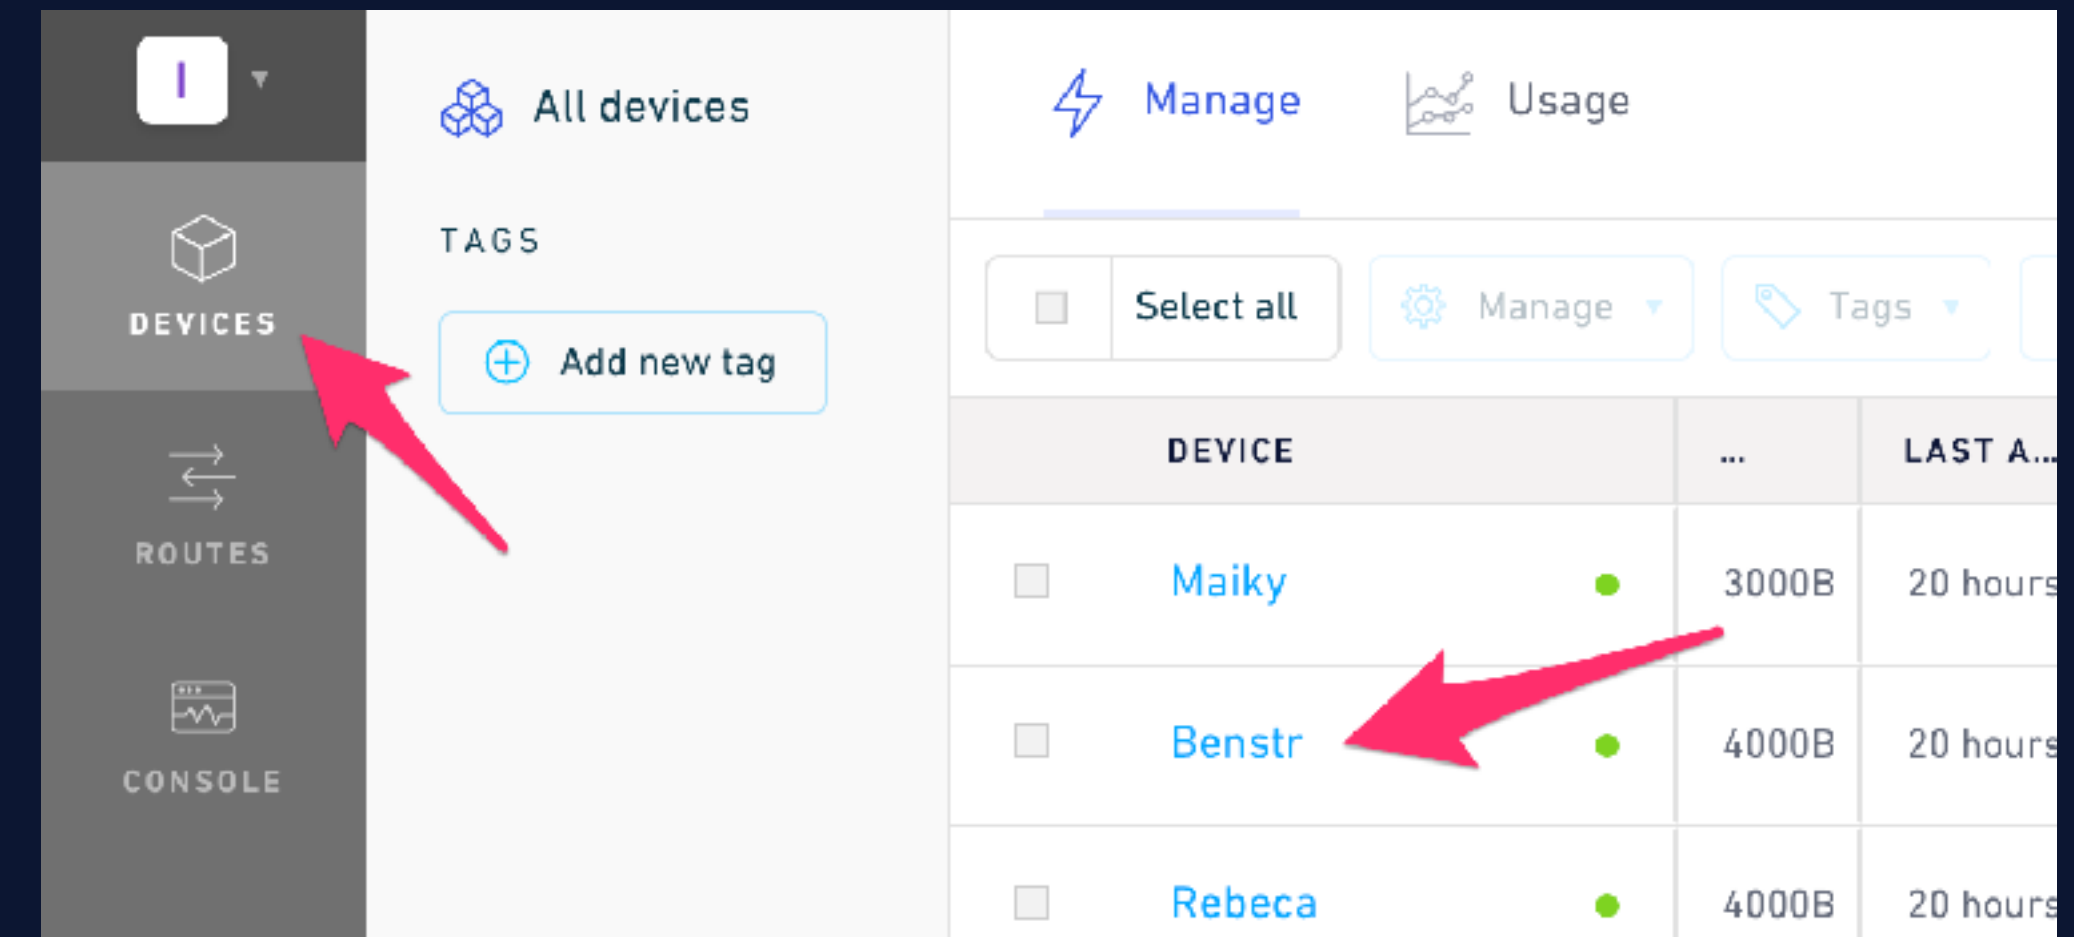

The screenshot shows a web-based IoT dashboard with a sidebar on the left containing icons for 'DEVICES', 'ROUTES', and 'CONSOLE'. The 'CONSOLE' tab is selected. The main area displays 'All activity' with a 'Filter' button and a 'View 2 new messages' button. Two messages are listed:

- Message sent from Maiky** (timestamp: Jan 26 2018, 11:12:11):
  - DATA: Yay, We did it!
  - TOPICS: Maiky, \_JSONSTRING\_ (1 more...)
  - Buttons: SIMULATE, VIEW RAW
- Message sent from Rebeca** (timestamp: Jan 26 2018, 11:11:38):
  - DATA: RECEIVE OK
  - TOPICS: \_API\_RESP\_ (1 more...)
  - Buttons: SIMULATE, VIEW RAW

Red arrows point to the 'CONSOLE' tab and the 'Yay, We did it!' data field.

# Send a Message From the Cloud

# Optional Challenge:

- 1) CREATE AN SMS ROUTE FROM THE HOLOGRAM DASHBOARD
- 2) CREATE A LOOP ON THE TRINKET THAT SENDS MESSAGES FROM THE SERIAL MONITOR

 All Done! 

You are now an official  
Cellular Evil Scientist

@HOLOGRAM

@\_BENSTR
